

Meeting the Challenges of Attacks, Breaches & Compliance

Combatting Attacks, Breaches and Compliance Issues with DMARC

The relationship between credit unions and their members is based on trust. As of late, this relationship has been jeopardized with the increase of sophisticated phishing attacks falsely being sent on behalf of credit unions and members innocently opening and following the steps in the communication. If the phishing email lands on the members' inbox, they are just one ill-advised click away from becoming a victim of fraud.

To reestablish trust in email communication, a protocol called Domain-based Message Authentication, Reporting & Conformance or DMARC was created. The DMARC standard can be used by any organization to access critical, raw reporting data that helps them see who is sending email and who is spoofing their domains.

What to do with all this reporting data? This is where DMARC Compass by Easy Solutions comes in. DMARC Compass is a cloud-based service that collects, parses, organizes and visualizes all this data to paint a complete picture of global email flood. This innovative solution offers organizations a simple platform to get everything in one place, including unrecognized senders, misconfigurations and unknown IPs spoofing email from the credit union's domain.

With DMARC Compass, credit unions have the ability to make sense of the data, set the stage for trusted domain-based email and allows them to take back control of their email channels from spammers and fraudsters.

DMARC Compass works even better when combined with a fraud intelligence solution. At Easy Solutions, we seamlessly integrate DMARC Compass with our fraud intelligence service, Detect Monitoring Service, allowing for a real-time feed of information that improves phishing attack visibility, speeds up takedown times, decreases losses related to account takeover and rebuilds the trust between the organization and its key stakeholders.
